

**A PRODUCTIVE CHERIMOYA TREE AT HOME. (ANNONA CHERIMOLA.
SEE S. P. I. NO. 45021.)**

This rather small tree was carrying over a hundred young fruits at the time it was photographed, and it was still flowering. The ripe fruits weighed about a pound each and were said to be of excellent quality. The productiveness of the tree and the high quality of the fruit commend it for trial in California and Florida. (Photographed by Wilson Popenoe at Antigua, Guatemala, October 26, 1916; P16915FS.)
